

THE STAND MATERIALS AND FIRE RULES STUDY

Will Your Exhibition Display Meet the Venue’s Fire Safety Rules?

What UK stand-item product pages say about fire performance, and what venue rules ask exhibitors to prove.

We read 1,034 product pages from 39 UK display suppliers, the exhibitor rules of 15 UK venues, 20 organiser exhibitor manuals and the AEV eGuide (August 2026 edition).

Sources captured 29 September 2026. Commissioned by Stand Central, which is excluded from the sample. The study reports what pages and rule documents state; it does not assess whether any product complies with any venue’s rules.

In this report

Section	What it covers
The four findings	Headline results and what each means for an exhibitor
Findings 1 to 4	One chart per finding with its denominator and qualifications
More from the rules and the pages	Verified context: venue delegation, eGuide editions, height rules, materials, supplier consistency
Rule sets at a glance	The eGuide, 15 venues and 20 organiser manuals on the key fire variables
Methodology and scope	Sample, protocol, coding, verification, limitations and disclosure
Source appendix	All 1,100 sources with verbatim excerpts

The four findings

1. Four in five product pages say nothing about fire

824 of 1,034 product pages (79.7%) from 39 UK display suppliers make no product-specific fire statement. Only 144 (13.9%) name a fire test standard.

The product page usually leaves a follow-up question for the buyer. We recommend asking the supplier for the named fire test and certificate covering the exact item before ordering, then comparing that evidence with the event's materials rules.

2. The dominant supplier label is absent from the eGuide

Of 144 product pages that name a fire standard, 119 (82.6%) cite DIN 4102 or a bare B1 label; shorthand is not a complete test designation. Only 4 cite BS 476-7, the test the AEV eGuide names for stand materials.

The full August 2026 eGuide mentions BS 476 on 4 lines and mentions DIN 4102, B1, EN 13501 and BS 5867 on 0, 0, 0 and 0 lines. Only one rule set in the study names DIN 4102 B1: the Floating Offshore Wind 2026 manual, and only for carpets and other floor coverings ("DIN 4102 - B1 and/or EN 13501-1 class C").

3. Table covers carry fire claims that backwalls lack

65.7% of table-cover pages state fire performance (44 of 67), against 20.4% of fabric backwalls (22 of 108) and 6.9% of counters and plinths (7 of 101).

Fire statements are common on table-cover pages but much rarer on fabric backwalls and counters. We recommend keeping a separate evidence entry for each item, with its supplier, named test and certificate, even when the graphics form one coordinated stand. Shares use pages whose own title confirms the item type.

4. The eGuide asks for certificates few pages offer

The eGuide says "Test certificates must be available for inspection for any materials intended to be used". Only 10 of 1,034 product pages (1.0%), from 3 suppliers, offer a fire certificate to download or on request.

11 of 15 venues point exhibitors to the eGuide (in their rules or by hosting a copy), but only 1 venue (P&J Live) and 3 of 20 organiser manuals restate the certificate rule in their own text.

Before build-up: questions the evidence raises

Which document does your venue or organiser point you to, and which fire test does it name? Does each supplier's page, or its certificate, name that test? Can you show a test certificate for every fabric and material on the stand, not just the table cover? The companion worksheet turns these into a checklist. The venue or organiser decides what it accepts; this study does not.

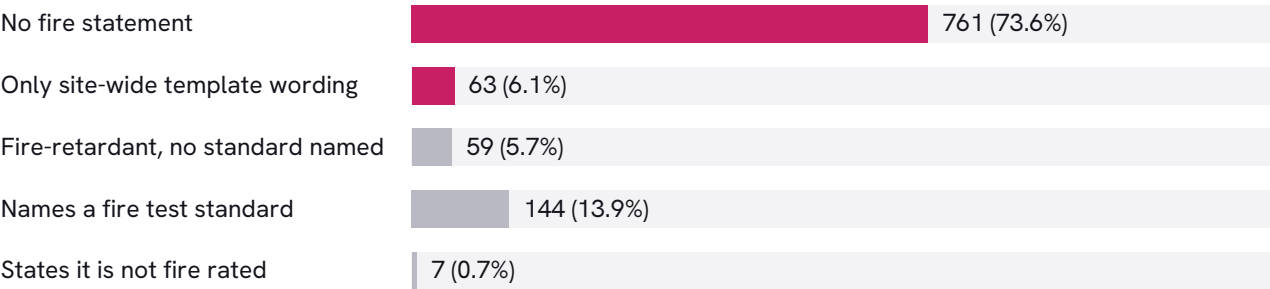

FINDING 1

Four in five product pages say nothing about fire

824 of 1,034 product pages (79.7%) from 39 UK display suppliers make no product-specific fire statement. Only 144 (13.9%) name a fire test standard.

Four in five product pages say nothing about fire

What 1,034 UK stand-item product pages say about fire. 824 (79.7%) make no product-specific statement (pink).

Captured 29 September 2026. Seeded random sample of up to 4 pages per supplier and item type. A page with no fire statement does not mean the product fails a fire test; the buyer cannot tell from the page.

Source: Product pages of 39 UK display suppliers (Access Displays, Backdropsource UK, BannerBuzz UK, Bannerworld, Creative Solutions Direct, Discount Displays, Display Wizard, Displays UK, Displaysense, Event Branding UK, Event Displays, Exhibitionstands.co.uk, ExpoDay, Fantasy Prints, Flags.co.uk, Fresco, GH Display, Go Displays, ISOframe, Indigo Displays, Ink on Fabric, Instant Exhibitions, Marler Haley, NPD Direct, Plus Display, Popup Stands UK, Print UK, Printdesigns, Reflex Exhibitions, Roller Banners UK, Sailflags, Standbanner, The Print Warehouse, UK Exhibition Stands, Unibox, XL Displays, Xpo Displays, Xtreme Graphics, Zoom Display). Every page URL is listed in stand-central-materials-sources.csv.

The product page usually leaves a follow-up question for the buyer. We recommend asking the supplier for the named fire test and certificate covering the exact item before ordering, then comparing that evidence with the event’s materials rules.

Excluding outdoor products makes little difference: 79.9% of 988 indoor pages make no product-specific statement. Specialist display suppliers contributed 778 pages and online printers 256.

FINDING 2

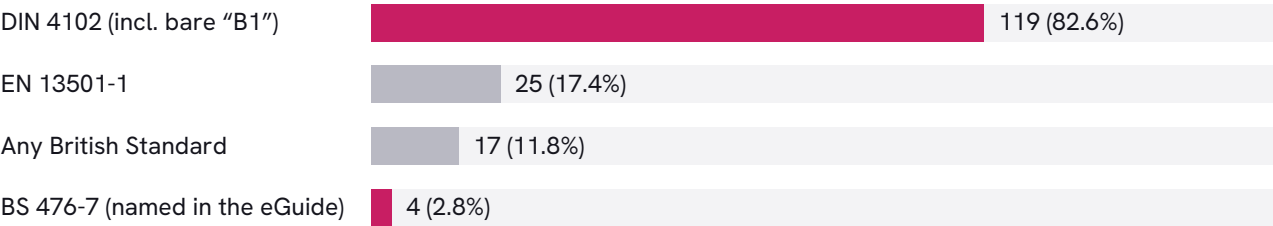

The dominant supplier label is absent from the eGuide

Of 144 product pages that name a fire standard, 119 (82.6%) cite DIN 4102 or a bare B1 label; shorthand is not a complete test designation. Only 4 cite BS 476-7, the test the AEV eGuide names for stand materials.

The dominant supplier label is absent from the eGuide

Fire test standards named on the 144 product pages that name one. A page can name more than one standard.

Lines naming each in the August 2026 eGuide: BS 476: 4; DIN 4102: 0; B1: 0; EN 13501: 0; BS 5867: 0

Captured 29 September 2026. eGuide line counts are regex counts over the full August 2026 eGuide text. The one rule set in the study naming DIN 4102 B1 (Floating Offshore Wind 2026) does so only for carpets and other floor coverings. Source: Product pages of 39 UK display suppliers (Access Displays, Backdropsource UK, BannerBuzz UK, Bannerworld, Creative Solutions Direct, Discount Displays, Display Wizard, Displays UK, Displaysense, Event Branding UK, Event Displays, Exhibitionstands.co.uk, ExpoDay, Fantasy Prints, Flags.co.uk, Fresco, GH Display, Go Displays, ISOframe, Indigo Displays, Ink on Fabric, Instant Exhibitions, Marler Haley, NPD Direct, Plus Display, Popup Stands UK, Print UK, Printdesigns, Reflex Exhibitions, Roller Banners UK, Sailflags, Standbanner, The Print Warehouse, UK Exhibition Stands, Unibox, XL Displays, Xpo Displays, Xtreme Graphics, Zoom Display). Every page URL is listed in stand-central-materials-sources.csv. Source: AEV eGuide August 2026 | https://cdn.asp.events/CLIENT_AEV_30A5AAAF_5056_B740_1746BDBB4A667186/sites/aev2022/media/eGuide/2026/eGuide-August-2026-clean-version.pdf

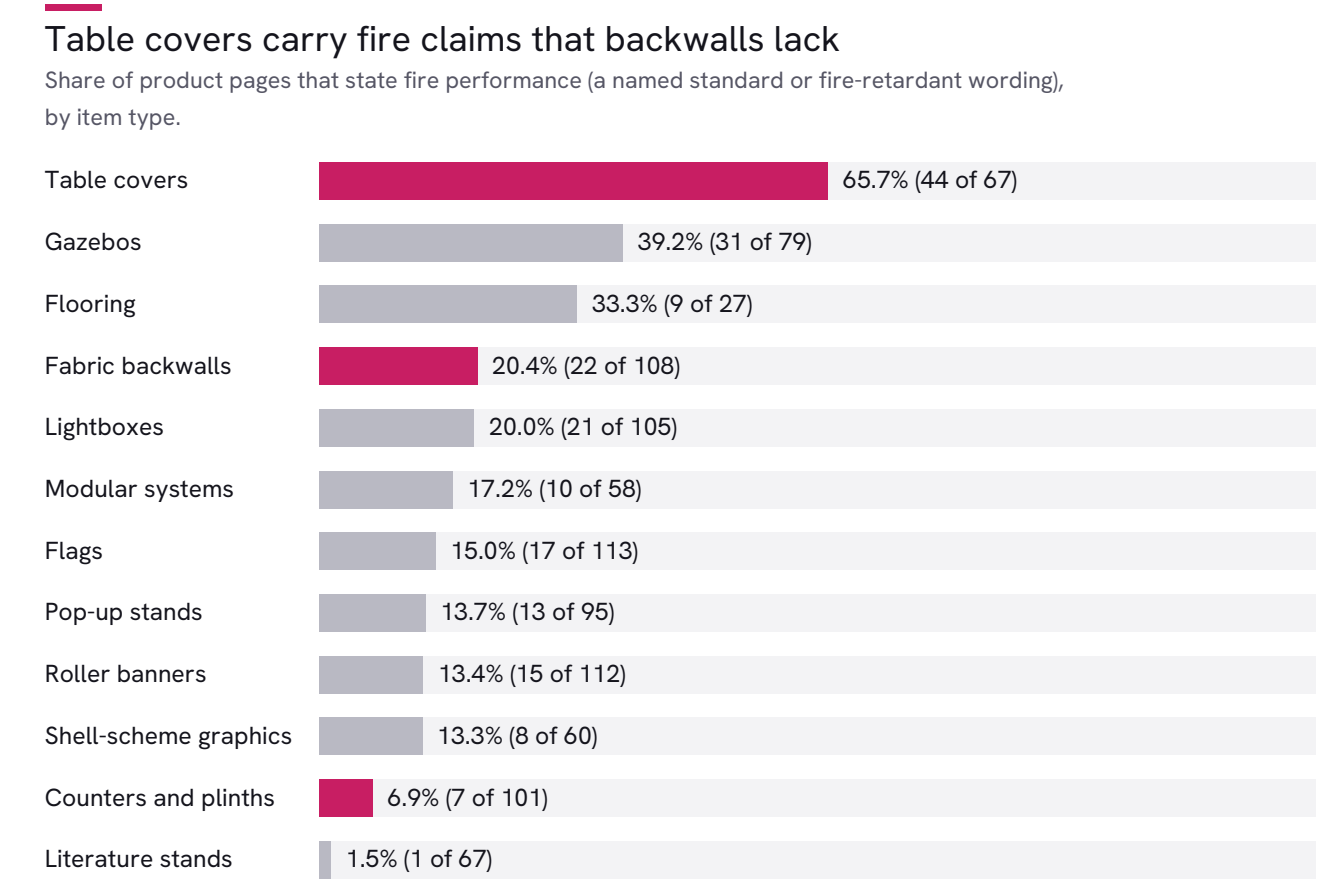

The full August 2026 eGuide mentions BS 476 on 4 lines and mentions DIN 4102, B1, EN 13501 and BS 5867 on 0, 0, 0 and 0 lines. Only one rule set in the study names DIN 4102 B1: the Floating Offshore Wind 2026 manual, and only for carpets and other floor coverings ("DIN 4102 - B1 and/or EN 13501-1 class C").

127 of the 144 standard-naming pages cite only non-UK standards. The four BS 476-7 pages come from Event Displays and Printdesigns. The eGuide, Excel London, P&J Live and the JTrade 2026 manual name BS 476-7 in their own text; the Brighton Centre names BS 476 Part 4 and BS 5438.

FINDING 3

Table covers carry fire claims that backwalls lack

65.7% of table-cover pages state fire performance (44 of 67), against 20.4% of fabric backwalls (22 of 108) and 6.9% of counters and plinths (7 of 101).

Captured 29 September 2026. Pages whose own title confirms the item type (992 of 1,034). Highlighted: the three item types compared in the finding.

Source: Product pages of 39 UK display suppliers (Access Displays, Backdropsource UK, BannerBuzz UK, Bannerworld, Creative Solutions Direct, Discount Displays, Display Wizard, Displays UK, Displaysense, Event Branding UK, Event Displays, Exhibitionstands.co.uk, ExpoDay, Fantasy Prints, Flags.co.uk, Fresco, GH Display, Go Displays, ISOframe, Indigo Displays, Ink on Fabric, Instant Exhibitions, Marler Haley, NPD Direct, Plus Display, Popup Stands UK, Print UK, Printdesigns, Reflex Exhibitions, Roller Banners UK, Sailflags, Standbanner, The Print Warehouse, UK Exhibition Stands, Unibox, XL Displays, Xpo Displays, Xtreme Graphics, Zoom Display). Every page URL is listed in stand-central-materials-sources.csv.

Fire statements are common on table-cover pages but much rarer on fabric backwalls and counters. We recommend keeping a separate evidence entry for each item, with its supplier, named test and certificate, even when the graphics form one coordinated stand. Shares use pages whose own title confirms the item type.

Literature stands are lowest (1.5%, 1 of 67), while gazebos (39.2%) and flooring (33.3%) sit between table covers and backwalls.

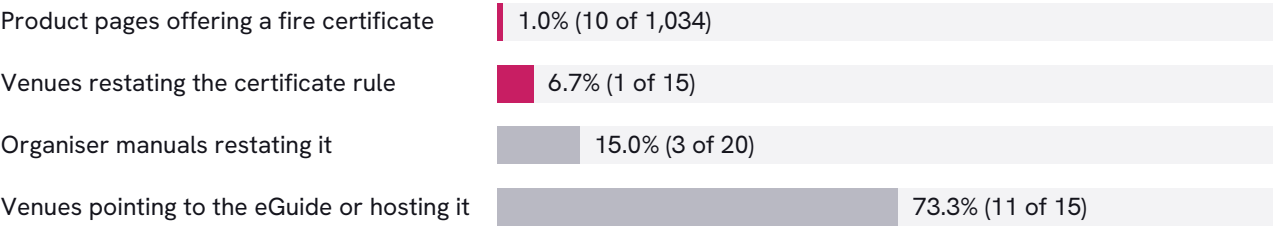

FINDING 4

The eGuide asks for certificates few pages offer

The eGuide says “Test certificates must be available for inspection for any materials intended to be used”. Only 10 of 1,034 product pages (1.0%), from 3 suppliers, offer a fire certificate to download or on request.

The eGuide asks for certificates few pages offer

eGuide clause 99: “Test certificates must be available for inspection for any materials intended to be used.” Share of each group that offers or restates it.

Captured 29 September 2026. Different denominators: 1,034 product pages, 15 venue rule sets, 20 organiser exhibitor manuals. Certificate offers are coded from page text. Suppliers offering certificates: Bannerworld, Event Branding UK, Printdesigns.
Source: Product pages of 39 UK display suppliers (Access Displays, Backdropsource UK, BannerBuzz UK, Bannerworld, Creative Solutions Direct, Discount Displays, Display Wizard, Displays UK, Displaysense, Event Branding UK, Event Displays, Exhibitionstands.co.uk, ExpoDay, Fantasy Prints, Flags.co.uk, Fresco, GH Display, Go Displays, ISOframe, Indigo Displays, Ink on Fabric, Instant Exhibitions, Marler Haley, NPD Direct, Plus Display, Popup Stands UK, Print UK, Printdesigns, Reflex Exhibitions, Roller Banners UK, Sailflags, Standbanner, The Print Warehouse, UK Exhibition Stands, Unibox, XL Displays, Xpo Displays, Xtreme Graphics, Zoom Display). Every page URL is listed in stand-central-materials-sources.csv.
Source: AEV eGuide August 2026, Stand Build sub-section | https://cdn.asp.events/CLIENT_AEV_30A5AAAF_5056_B740_1746BDBB4A667186/sites/aev2022/media/eGuide/2026/2026-subsections/Stand-Build-August-2026-subsection.pdf
Source: Venue and organiser rule documents (P&J Live, Floating Offshore Wind 2026, JTrade 2026, Pensions UK Annual Conference 2026 and others) | URLs in stand-central-materials-sources.csv

11 of 15 venues point exhibitors to the eGuide (in their rules or by hosting a copy), but only 1 venue (P&J Live) and 3 of 20 organiser manuals restate the certificate rule in their own text.

The certificate wording in P&J Live’s rules matches the eGuide clause. The three organiser manuals that restate a certificate rule are Floating Offshore Wind 2026, JTrade 2026, Pensions UK Annual Conference 2026.

More from the rules and the pages

Verified context from the same data. These are not additional headline findings.

Venues delegate the materials rule

11 of 15 venues point exhibitors to the eGuide (in their rules or by hosting a copy), 3 name a fire standard for stand materials in their own documents (The Brighton Centre, Excel London, P&J Live) and 1 (P&J Live) reproduces the eGuide’s materials clauses word for word (10 of 11).

Materials rules are stable across eGuide editions

All 11 key materials clauses read the same in the December 2024, March 2026 and August 2026 editions that venues host or link. NEC’s rules link an August 2023 edition, and the UKSG 2026 manual (SEC Glasgow) cites the August 2016 and July 2014 editions for electrical rules.

One height everyone agrees on

Every rule set that states a complex-structure trigger uses 4 m (11 of 11, including the eGuide), while 7 rule sets also set a separate maximum build or wall height from 2.5 m to 6 m.

Polyester on aluminium dominates

Aluminium is named on 78.1% of pages that name a frame material (425 of 544); polyester fabric on 80.1% of pages naming a graphic material (565 of 705). Roller banners are the exception: PVC 28 against polyester 36 of 68 pages.

Statements depend on the page you land on

Of 36 suppliers with two or more indoor fabric or PVC products sampled, 22 state fire performance on some and not others, 14 on none and 0 on all.

Other rules in the venue and organiser documents

Rule stated in the rule set’s own documents	Venues (of 15)	Organiser manuals (of 20)
Risk assessment and method statement required	11	17
CDM regulations referenced	10	12
Working-at-height rule stated	8	7
Electrical testing rule stated	6	4
Consequence of non-compliance stated	5	6
Helium balloons banned or restricted	5	7
Naked flame banned or restricted	4	1

Counts use each rule set’s own documents. A blank or not_stated value means the documents are silent, not that the rule does not apply.

Rule sets at a glance

The eGuide reference rule set, 15 venues and 20 organiser manuals. Values are coded from each rule set's own documents; the full rows with excerpts are in the rule-variables CSV.

Rule set	Type	Standard named	Certificates	eGuide reference	Clauses verbatim	Complex trigger	Max height

Methodology and scope

Research question

What are UK exhibition stand items made of, what do supplier product pages say about their fire performance, and what fire and safety rules do UK venues and organisers apply to them? The study reports what pages and rule documents state. It makes no statement that any product is or is not compliant, and it does not assess whether one fire standard is equivalent to another.

Sample

We read 1,034 product pages from 39 UK display suppliers, the exhibitor rules of 15 UK venues, 20 organiser exhibitor manuals and the AEV eGuide (August 2026 edition). Product pages come from 778 specialist display supplier pages and 256 online printer pages. The data hold 1,537 coded rows: 1,034 product-page rows and 503 rule-variable rows from 36 rule sets (the eGuide, 15 venues and 20 organiser manuals).

Suppliers, venues and organisers from which no usable data was obtained are excluded from the study and are not described as part of the sample. Stand Central, which commissioned the study, was excluded from the sample before collection.

The organiser exhibitor manuals are a purposive context sample of current 2026 and 2027 UK show manuals found on show websites. They are analysed separately from venues and are not presented as representative of any wider set of shows.

Timeline and protocol

A timestamped protocol was written at 2026-09-29T11:21:29Z, before any product page or rule document was collected for coding. It defines the questions, units, sampling frames, eligibility, missing-data rule and analysis. Every later change to the method was logged with its date and time. The changes to collection and coding were all made before any share or tally was computed. Three changes came after the first analysis and are disclosed here. First, material codes taken from link text pointing to other products were removed (no fire, standard or certificate value changed). Second, suppliers, venues and organisers that gave no usable data are not reported as part of the sample, which changed no computed value. Third, the same rule was applied to venues and organisers whose captured documents gave no usable rule data, so they left the sample; no value of any retained rule set or product page changed.

All sources were captured between 2026-09-29T11:19:28Z and 2026-09-29T12:15:38Z (UTC). Results describe pages and documents at that time.

Product pages (Part A)

Unit: one product page of one item type from one supplier. Product URLs were taken from each supplier's sitemap (or home-page links), classified into 12 item types by fixed keyword rules, and sampled in a seeded random order: up to 4 pages per supplier and item type. Listing pages, accessories and spare parts, marketplace listings and duplicate content were excluded by fixed rules. Pages that failed a plain fetch had one headless-browser attempt; human-verification pages were never bypassed.

Coding: a deterministic rule-based coder searched the full captured text of each page (template lines repeated across a supplier's site and related-product blocks removed) and stored the exact matching line as a verbatim excerpt with a line locator. Fire statement categories: names a fire test standard; fire-retardant wording with no standard; states the product is not fire rated; fire wording only in site-wide template text; no fire statement. A bare "B1" in a fire context is counted as a DIN 4102 B1 claim and reported separately.

Materials are coded multi-label, only where the product text names them.

Venue and organiser rules (Part B)

Unit: one rule set, meaning the current published exhibitor, technical or event regulations of one venue, or one organiser manual for one show edition. Several documents of one venue are pooled, and each value keeps its own source. Venue values are coded from the venue's own documents; a copy of the eGuide hosted or linked by the venue is recorded separately. The AEV eGuide August 2026 (Stand Build and Electrical sub-sections) is coded as the reference rule set.

Fourteen rule variables were coded with verbatim excerpts, including the fire standard named for stand materials, whether test certificates must be available, on-site testing, height triggers, working at height, risk assessments, CDM, electrical testing, bans, stated consequences and how the rules refer to the eGuide. A silent rule set is coded `not_stated`; silence is never read as permission. 7 coded rows carry an analyst override, each with a stated reason in the data.

eGuide reproduction test: 11 key materials clauses fixed from the August 2026 Stand Build sub-section. A rule set reproduces a clause when any 12 consecutive normalised words of the clause appear in its text (lower case, punctuation removed, and the letter pairs `fl` and `fi` removed from both texts because some PDF text layers drop those ligatures).

How each central finding is calculated

- Silent pages: product pages with no fire statement or only site-wide template wording, divided by all 1,034 product pages = 824 / 1034 = 79.7%. Indoor-only share: 79.9% of 988 pages.
- Standards: of 144 pages naming a standard, pages naming any DIN 4102 code or a bare B1 = 119 (82.6%); naming BS 476-7 = 4. eGuide mentions: regex line counts over the full August 2026 eGuide text (BS 476 on 4 lines; DIN 4102, B1, EN 13501 and BS 5867 on 0 lines).
- Item types: per item type, pages whose title confirms the type, stating fire performance (named standard or fire-retardant wording) divided by those pages. Table covers 44/67, fabric backwalls 22/108, counters and plinths 7/101.
- Certificates: product pages offering a fire certificate to download or on request = 10 of 1,034 (1.0%), from 3 suppliers. Rules restating the certificate rule in their own text: 1 of 15 venues and 3 of 20 organiser manuals. Venues pointing to the eGuide: own-text reference to the eGuide or a hosted copy = 11 of 15.

Verification

Every coded value keeps its source ID, URL, publisher, UTC capture time and verbatim excerpt with a locator. Every excerpt is checked by script against the saved capture. All derived numbers are regenerated by script from the observations, and the calculation behind each finding is set out above.

Independent live re-check on 29 September 2026: 1,081 of 1,081 sources behind the claims were fetched again. All excerpts were found again on 856 of 856 rows with excerpts, and 824 of 824 rows coded as having no product-specific fire statement still showed no fire term on the fresh page. 0 rows were unavailable.

This publication package recomputes every headline number independently from the canonical observations and checks it against the canonical analysis before any file is written.

Limitations

- Absence is page-level. A product page with no fire statement does not mean the product fails a fire test or lacks a certificate; it means the buyer cannot tell from the page.
- Certificate offers are coded from page text, not from privately held paperwork. A certificate file linked without any certificate wording on the page would be missed.
- Item-type comparisons measure published information, not fire performance. We did not test materials, observe stand acceptance or measure why suppliers describe categories differently. Statement counts do not establish fabric area, treatment, printing or finished construction.

- Material shares are over pages that name a material; pages that name none stay unknown, not zero.
- The product sample is seeded and random within each supplier and item type. It is not weighted by sales or market share.
- Part B coding is rule-based with a small number of documented analyst overrides. Two PDF text layers lost the fl and fi ligatures; the verbatim test handles this symmetrically.
- One supplier's site placed part of its catalogue behind human verification, which was not bypassed; its captured pages are included.
- The study does not assess compliance, the equivalence of different fire standards, or what any venue will accept on site. Venues, organisers and their safety officers decide that.
- Findings describe pages and documents at capture time (29 September 2026) and may change.

Commercial-interest disclosure

Commissioned by Stand Central, a UK retailer of exhibition displays. Stand Central was excluded from the sample before collection and is not coded, counted or named in the data. Findings describe what pages and rule documents state, not product quality or safety.

Data and reproduction

The accompanying CSV files hold every product-page and rule-variable row with public field names, a rule-set summary, the item-type table and a source register with minimal verbatim excerpts, locators, publishers, URLs and capture times. Raw captures and internal paths are not distributed. Blank cells are null or empty in the canonical data, never zero.

Excerpts: "We're really pleased to use an industry-recognised eGuide created by people who understand what it takes to deliver great events. In fact, we've been using the principles within the eGuide to shape our processes for several years already, so adopting it formally feels like a natural step. Having a shared industry benchmark helps create consistency that event organisers can trust, while making planning simpler, supporting safer environments, and giving everyone a clear and reliable reference point." | "Using the eGuide is crucial, adopting it allows our venues to show suppliers and organisers they are following consistent industry agreed guidelines. Once annually approved, all adoptees can use our year specific eGuide adoptee logo to demonstrate they are abiding by the guidelines set in the eGuide." Michelle Baldwin, Head of Events at the NEC Group and Group Chair of the AEV said, | "Seeing venues adopt the e-Guide together is a real step forward for the industry. A shared standard builds confidence, raises expectations, and shows our collective commitment to creating safe, consistent environments for everyone. Our ambition is to grow this adoptee status so more venues are aligned in our approach. If you want to find out about doing so, please contact us." Find out more at
